General Information

About MARKEL LIGHTING

To people who are building new homes or modernizing old homes, Markel Lighting offers several unique advantages.

Chief of these is the fact that Markel Lighting is scientifically engineered for easier, more comfortable seeing. New methods and new materials have been developed so that now you may have the full amount of light you need for close seeing, yet without any harsh glare. The brightness is shaded and the light diffused throughout the entire room so evenly so that your eyes are just as much at ease as they are outdoors.

As you look through this new catalog you will find a large number of new shaded light models, both metal and glass and all glass, designed for the utmost in eye comfort. These new designs, beautiful as they are, are not the creations of lighting stylists or decorators alone, but represent also the closely coordinated efforts of Markel illuminating engineers. No new Markel design is put in production until it meets today's most rigid specifications for better light and better sight.

Thus far Markel is the only residential lighting equipment manufacturer with complete laboratory facilities and qualified personnel in their own plant, for developing and testing new kinds of lighting, and for exercising strict quality control over daily production.

Famous for better light, Markel is also known to the trade and to the public for creative designing. Every new Markel line has charm and individuality, whether it's an authentic period style or a modern design intended to harmonize with average home furnishings.

As for price, though it never has been the policy of Markel Lighting to sell purely on a price basis, it's surprising how reasonably you can buy Markel quality equipment. This is a saving made possible by the Markel plant's large scale purchasing of materials and modern, efficient production methods.

WIRING

All Markel Fixtures which are wired, are approved by the Underwriters' Laboratories, and are so labeled, except where specifically stated to the contrary in the catalog description. All wiring is complete except where otherwise stated; and fixtures are packed with all necessary fittings, for installation without loss of time or expensive delays.

All Markel fixtures are wired with Underwriters' approved wire of the type required for each specific fixture, identified for polarity and suitable for service up to 250 volts. They are equipped with Edison screw type or Mogul Sockets and Switches, according to the requirements of each fixture as specified in the individual catalog description and specifications. Brackets have Edison Screw Type, Keyless Sockets and Canopy Switches or Turn Knob Sockets as specified in the individual catalog description.

Each Markel Fixture is thoroughly inspected for perfection in finish, wiring, insulation resistance and polarization, thus eliminating all dangers from grounds or short circuits.

PACKING

All Markel Fixtures are packed one in a carton, including brackets, except where otherwise specified. Each carton is accurately labeled on the outside for easy identification. The standard quantity consists of five cartons of one fixture each, or ten cartons of one bracket each or small ceiling fixtures, except where specifically stated to the contrary.

TELEGRAPH AND CABLE CODES

Note that every Markel item carries its own code word. We urge you to use this code for convenience and economy in ordering Markel Fixtures.

A GUARANTEE OF QUALITY

All Markel Fixtures are built to a high standard of quality which permits us to guarantee them to be free from all imperfections in quality of materials and workmanship.

CANADIAN FACTORY

Markel Fixtures are also made and distributed in Canada by Markel Electric Products, Ltd., in a fully equipped plant at Fort Erie North, Ontario, Canada.

The 8280 Line

CLASSIC SIMPLICITY is the keynote of this popular Markel line. Harmonizes beautifully with any type of room, period or modern, and furnishes mellow, comfortable light that's easy on the eyes. The finish is gleaming Colonial Brass, and the glassware a warm beige. In addition to the models above this line includes new smartly styled close-to-ceiling fixtures. For illustrations and descriptions see the reverse side of this page.

7212

The 7210 Line

STYLED FOR BEAUTY—BUILT FOR BETTER LIGHT. It took the combined efforts of expert stylists and illuminating engineers to bring you fixtures so distinguished in appearance yet efficient from a lighting standpoint. Semi-indirect, the light shows colorfully through the inverted bottoms of Ivory lustre glass, and at the same time is thrown upward to the ceiling for reflection to the entire room. Attractive modern close-to-ceiling models are included in the line—see reverse side of this sheet.

The 4350 Line

ARTISTIC NEW BOWL MODELS. The glassware used on these new models is really a work of art — carefully made and beautifully decorated. The even numbers in the line have Honey colored bowls with stippled lustre decoration on the outside. The odd numbers have Ivorytone bowls shaded with Tan. Either glass provides excellent lighting.

SMARTLY STYLED SHADED BRACKETS; KITCHEN OR BATH. Because of their trim appearance and high output of comfortable, shaded light, these Markel brackets are frequently used to replace old-fashioned kitchen and bathroom units. And they're popular with new home builders, too. Note that four of the models are equipped with convenience outlet.
